Janani Selvaraj

Senior Software Engineer | Backend & Microservices | Golang, .NET, AWS | Scalable Systems

Chennai, Tamil Nadu, India

Summary

I'm a backend-focused software engineer building scalable systems and enterprise applications in the energy and data domain. I've worked across Golang and .NET, designing microservices, event-driven systems, and cloud-based solutions on AWS. At Siemens, I've contributed to large-scale energy management platforms, developing features such as anomaly detection, data quality, regression-based analytics, and notification frameworks that turn complex data into actionable insights. I've also contributed to architectural decisions, mentored engineers, and collaborated across teams to deliver reliable and scalable solutions. What drives me most is solving complex problems — understanding systems deeply, identifying edge cases, and building clean, efficient software. Tech stack: Golang, .NET, AWS, Microservices, Event-driven architecture

Experience

Siemens Technology and Services Private Limited

5 years 10 months

Senior Software Engineer

October 2022 - Present (3 years 6 months)

Chennai

Smart Buildings | Energy & Sustainability Management

- Contribute to the design and development of a large-scale, multi-tenant energy management platform
- Design and build backend services using .NET (previously Golang) in a microservices and event-driven architecture
- Developed key business features including:
 - Anomaly detection for energy meters to improve data reliability
 - Multiple linear regression models for energy analytics and insights
 - Notification and alarm enablement systems for proactive monitoring
 - Weather normalization and data quality for accurate reporting

- Improved system performance through reusable data caching and optimized workflows
- Actively contribute to architectural decisions, domain modeling, and system design discussions
- Conduct code reviews and mentor engineers to improve code quality and design thinking
- Collaborate with cross-functional teams, stakeholders, and product owners to deliver reliable and scalable solutions

Software Engineer

June 2020 - October 2022 (2 years 5 months)

Chennai

Energy Manager | Data Design Assistant

- Contributed to the development of Energy Manager, building modules to compute energy performance indicators, supporting ISO-certified solutions
- Built AWS Lambda-based microservices for scalable, serverless processing
- Optimized performance of the auto-discovery of data points using apogee insight and PX designo algorithms
- Contributed to data management tools enabling bulk configuration and modification of system entities
- Developed and maintained end-to-end test suites using TestCafe to ensure application reliability and quality

Cognizant

4 years 11 months

Associate Software Engineer

August 2017 - June 2020 (2 years 11 months)

Chennai

Image Vision, Pepsico

- Developed 15+ web services for document processing and automation
- Integrated systems with AWS S3, FileNet, and SAP ERP
- Built APIs for document storage and transformation workflows

Programming Analyst

January 2016 - August 2017 (1 year 8 months)

Chennai

Insurance Domain | OPUS (Proposal & Underwriting System)

- Developed backend services for an insurance proposal and underwriting system handling policy generation and processing

- Built web services to generate and process XML data for proposal document creation
- Contributed to automation of insurance workflows, improving efficiency in proposal processing and validation

Programming Analyst Trainee

August 2015 - January 2016 (6 months)

Chennai, Tamil Nadu, India

Education

Velammal Engineering College

Bachelor of Engineering - BE, Computer Science · (June 2011 - May 2015)

CSI Bain School

· (March 2009)
