Evaluate Candidates

Jaswanth Navara - Jaswanth_Navara_Resume.pdf

Senior .NET Full Stack Developer

Evaluate Resume

Jaswanth Navara

6/10

Experience

6/10

The candidate has 3+ years of experience, which is below the required 5-8 years specified in the job description. While the candidate demonstrates proficiency in technologies such as C#, ASP.NET Core, Angular, and SQL Server, they lack significant experience with React, Docker, GraphQL, and Kubernetes. Additionally, there is no clear indication of work in microservices architecture at scale or experience with AWS, which were preferred skills for the role.

Work History

7/10

The work at L&T Construction is relevant as it showcases experience with .NET and Angular-based enterprise applications, solid coding principles (SOLID), REST API development, and CI/CD pipelines with Azure DevOps. However, the lack of senior or lead roles indicates a shortfall in leadership experience expected of a senior position. The projects described are impactful but do not highlight collaboration with cross-functional teams or large-scale architecture work.

Education

8/10

The candidate has a Bachelor's degree in Computer Science with a strong GPA of 8.60/10, which meets the educational baseline for this role. While the degree is relevant, no further advanced degrees or certifications in cutting-edge technologies (e.g., .NET 8, Kubernetes, or microservices architecture) were listed.

Side Projects

5/10

The candidate does not explicitly list any personal side projects outside of work deliverables. While certifications are included, independent work that could showcase innovation, learning agility, or experience with tools like Docker, Kubernetes, or Terraform is missing.

Job Fit

6/10

The candidate has a solid foundation in .NET and Angular development with practical experience in CI/CD pipelines and enterprise applications. However, the lack of experience in React, Docker, Kubernetes, and certain architectural considerations such as performance optimization, microservices, and cloud-native tools (AWS or Azure Functions) limits alignment to this senior-level role.

Aww Factor

6/10

The candidate's work on automating key financial and compliance processes is impressive and impactful. However, these achievements are within their current domain, and there are no standout contributions that clearly exceed the expectations for a mid-level developer.

Uniqueness

6/10

The candidate demonstrates a solid, well-rounded skill set, particularly in developing ERP applications and automating business workflows, but these are common for many candidates in this field. Distinctive attributes like in-depth knowledge of modern technologies like Kubernetes, Docker, or leadership in complex system architectures are missing.

What Sets Them Apart

Efforts to optimize ERP applications, process automation, and implementing clean architectures demonstrate good problem-solving skills.

Estimated Current Package

10-13 LPA

Current Role

**Mid-Level .NET Full
Stack Developer**

Expected Salary

15-20 LPA**Not recommended for L1 round**
